**DETAILED ACTION**

***Notice of Amendment***

1. In response to the Pre- Appeal Brief Conference decision mailed 03/13/2007.

The following reiterated grounds of rejection are set forth:

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 and 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Densert et al (US 6,159,171, hereinafter Densert) in view of Richards (US 4,014,320) as broadly as structurally claimed.

4. Densert et al (US 6,159,171) discloses the claimed invention including the following:

5. For claims 1, 7, and 20-23, Densert discloses a head stabilized medical device (1), comprising:

- plural different vestibular-parameter measuring/ modifying vestibular-parameter data delivering and data receiving devices (elements 19,20,28 and 30) anchored to said frame; and
- a communication structure (the wires as seen in Figures 1-2), for operatively connecting, transmitting and receiving, vestibular-relevant parameter data devices to

Art Unit: 3736

a computer structure (29) (column 4 lines 49-52) capable of executing real-time vestibular diagnosis/treatment algorithms with feedback responses (column 7 lines 3-6) effective to alter air-pressure stimuli.

6. For claims 2 and 8, Densert discloses air-pressure modifying vestibular measuring/modifying devices (column 1 lines 6-48).
7. For claims 3-6, Densert discloses a sound delivering device creating pressure waves through air removably insertable into the ear comprising a tubular body (24) with a tapered insertion bulb or nozzle (25) effective to sealably engage the ear, and capable of piercing the tympanic membrane, and having a digitally manipulated maneuverable enlargement region (17 and 18) connected to said body at a proximal location of the inserted end.
8. Thus, Densert discloses the claimed invention except for explicitly disclosing or explicitly showing a stabilized head-dependent wearable frame structure. Richards teaches and shows (as best seen in Figure 1) an air-pressure modifying vestibular measuring/modifying device (10), comprising: a stabilized head-dependent wearable frame structure (12). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the vestibular diagnostic device as taught by Densert, with the vestibular diagnostic device as taught by Richards for the purpose of increasing the diagnostic efficacy of a vestibular diagnostic device with positional stabilization for accurate correlation of data.

***Response to Arguments***

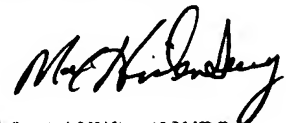

9. Applicant's arguments with respect to claims 1-8 and 20-23 have been considered but are moot in view of the new ground(s) of rejection.
